Centerinox nel mondo

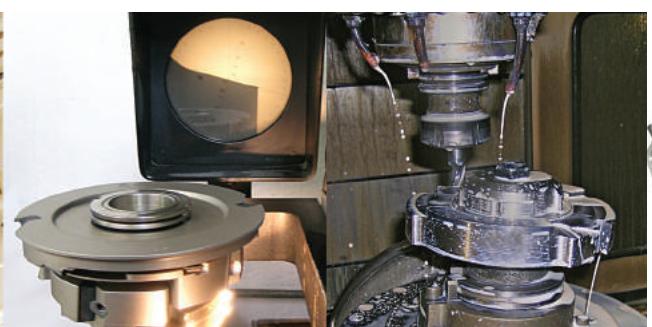

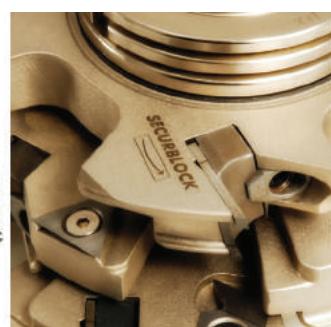

Centerinox in the world

Via Brasile, 13 (C.da Granaro)
63066 Grottammare (AP) - Italy
Tel. +39 0735 735278
Fax +39 0735 735380
e-mail: info@centerinox.it
www.centerinox.it

Il nostro stabilimento si trova a soli 5 minuti dall'uscita autostradale A14 in direzione ovest, sulla Strada Provinciale 92 Valtesino.

Our factory lies near Grottammare's way out from the highway "A14".

All'inizio degli anni '70, i fratelli Ciarrocchi, fondatori della società decidono di dare vita ad una realtà imprenditoriale ricca di dinamismo ed intraprendenza. Queste qualità si possono tradurre oggi in un'unica parola: Centerinox srl.

Alla Centerinox progettiamo e produziamo utensili per la lavorazione del legno e simili, con particolare interesse nella realizzazione di frese adibite all'industria del serramento.

Il tutto controllato e certificato tanto da garantire affidabilità e precisione.

Nel tempo, grazie alla continua ricerca nella progettazione, abbiamo accumulato una grande esperienza tecnologica che ci permette di presentare ogni volta soluzioni personalizzate, finalizzate al raggiungimento della massima soddisfazione del cliente più esigente.

Questa lunga attività ci ha portato a proporre oggi un catalogo con più di 300 articoli standard.

In the early 70's, the Ciarrocchi brothers, company founders, decided to create a new resourceful business, rich in dynamism.

Today, we can find the same founding qualities in the Centerinox company.

We design and produce tools for wood processing and similar, with a particular interest in realizing rotare cutters used in fixtures industry; the entire process is controlled and certified to grant reliability and precision.

During those years, thanks to a constant research in designing, we have reached a great technology experience, that allows us to present customized solution studied for the best customer's satisfaction.

This long time activity brought us to propose today a 300 standard articles catalogue.

ISTITUTO PER LA TUTELA DEI PRODUTTORI ITALIANI

Made in Italy 100% Certificate

REGISTRAZIONE N° IT01.IT/979.034.V

SI ATTESTA CHE
This is to certify that

CONDIZIONE GENERALE DI VENDITA

PREZZI: I prezzi si intendono per utensili di costruzione di serie. Eventuali modifiche, consensualmente concordate, dovranno risultare per iscritto.

SPEDIZIONE: La spedizione della merce si intende effettuata a rischio e pericolo del committente. In caso di manomissioni o danneggiamento dei prodotti durante il trasporto, il destinatario dovrà rivolgersi esclusivamente ai vettori. Eventuali reclami alla fornitura dovranno, sotto pena di decadenza, essere inoltrati entro 8 giorni dal ricevimento della merce.

CONSEGNE: I termini di consegna concordati o riportati sulle conferme d'ordine sono indicativi e non sono impegnativi ma subordinati sempre alla fabbricazione. Essi non costituiscono diritto all'annullamento dell'ordine nel caso la consegna non potesse essere rispettata per cause non dipendenti dalla nostra volontà.

PAGAMENTI: Tutti i pagamenti devono essere effettuati direttamente alla sede. Non sono ammessi arrotondamenti o trattenute arbitrarie.

GARANZIA: Tutti gli utensili sono garantiti sotto ogni aspetto, purchè non presentino inconvenienti dovuti ad errato uso, evidente manomissione o impiegati in condizioni non consentite dal tipo di materiale usato per la loro fabbricazione.

ESEMPIO DI ORDINAZIONE: Per migliorare e velocizzare lo svolgimento degli ordini, Vi preghiamo di eseguire le ordinazioni usando il codice dell'articolo richiesto o, in caso di merce speciale, di fare sempre riferimento al codice dell'articolo più simile.

GENERAL SALES CONDITION

PRICES: Prices shown are for standard production series tools. Any eventual modifications, previously agreed to, must be verified in writing .

SHIPPING: Goods are shipped at the customer's own risk and responsibility .In the case of damage or tampering during transportation the consignee must direct all complaints to the forwarder. Any eventual complaints regarding the goods supplied must be made strictly within 8 days of receipt of goods.

DELIVERY TIMES: The delivery times agreed and shown on the order confirmation are approximate and not binding but subject to production schedule .No right to cancel the order shall be granted in the case of these delivery times not being kept due to reasons beyond our control.

PAYMENT :All payments must be made directly to head office .No rounding off of amounts or deduction are admissible.

WARRANTY: All tools are guaranteed in every aspect, as long as they do not show evidence of improper use, obvious misuse or have been used under conditions unsuitable for the type of material they were made from .

ORDERING PROCEDURE: To speed up and make ordering more efficient, you are kindly requested to place orders using correct code for the item required or, in case of special purpose items ,with reference to the code of the most similar code

INTRODUZIONE

La produzione della CENTERINOX già definita HIGH TECNOLOGY per la precisa impronta qualitativa che la contraddistingue, presenta ora un nuovo catalogo.

L'Azienda propone un ampio assortimento di soluzioni standard, sviluppate in base alle richieste del mercato in ogni settore della lavorazione del legno e delle materie plastiche; questi utensili, definiti "STANDARD o DI SERIE" sono disponibili in magazzino .

L' utilizzo di nuovi materiali e lo sviluppo di tecnologie e sistemi di lavorazione innovativi, uniti alle esigenze della clientela, portano alla realizzazione di soluzioni specifiche.

Il nostro ufficio tecnico è quindi a disposizione per risolvere qualsiasi problema si presenti quotidianamente, e la nostra esperienza trentennale ci permette di soddisfare con successo le esigenze della nostra clientela sia in italia che all'estero attraverso un organizzazione di vendita diretta o tramite rivenditore.

Il punto di forza della CENTERINOX è il sistema di fissaggio meccanico brevettato, che garantisce lavorazioni ottimali e una rapida sostituzione dei coltelli, rispettando tutti gli standard di sicurezza EN847-1.

INTRODUCTION

The CENTERINOX production already called HIGH TECNOLOGY will be now show on this new catalogue.

Our company offers a wide range of standard and special solution of any sector of wood manufacture and plastic materials, developed on demand of industry.

The utilization of new material development of new technology and costumer demand, bring CENTERINOX to study a costumize solution for each situation.

Our technical office formed by expert persons is ready to solve any kind of problem or just give simply suggestion.

We manufacture since 30 years and we are present in national and international market by dealer organization.

One of our strong point is the mechanical fixing patent, who allow optimum processing and fast substitution of knives.

In our laboratory we test and check continually all the tools in order to obtain safe utilization ;all our production is made according the safe rule being force in Europe EN847-1 .

CENTERINOX is glad to offer to you this new instrument of work for choice a right product suitable for your need.

Sistema SecurBlock

I nostri utensili sono in costante sviluppo in modo da essere sempre in grado di soddisfare il cliente. E' fondamentale, in questo senso, la nostra presenza continua nel rapporto con i clienti e produttori di macchine, e la nostra ricerca costante per garantire il più alti livelli di tecnologia e precisione.

Sistema SecurBlock

Centerinox è lieta di presentare SecurBlock, un dispositivo straordinario e innovativo sviluppato nel nostro reparto di ricerca.

Questa geniale invenzione offre soluzioni efficaci per utensili che montano coltelli sagomati. L'innovativo sistema di posizionamento automatico dei coltelli, permette di ottenere un profilo costante e la massima qualità di finitura, migliorando il rapporto prezzo-prestazioni.

SecurBlock System

Our tools are in constant development in order to be always able to meet the customers growing requests.

It is fundamental, in this sense, our continuous presence in the relationship with customers and machinery manufacturers and our consistent research, that guarantee the highest level of technology and precision.

SecurBlock System

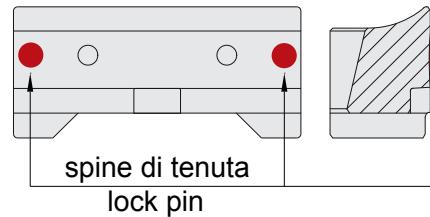

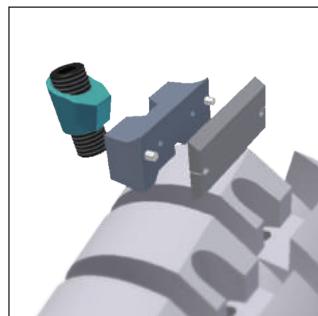

Centerinox is glad to present Secure Block an extraordinary and innovating device, developed in our research department.

This ingenious inventive offers efficient solutions for tools which mount shaped and already sharpened knives.

The innovating knives auto positioning system, allows to obtain a steady profile for the highest finish quality and a high price - performance - ratio.

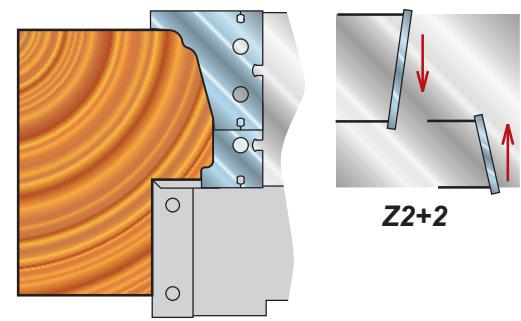

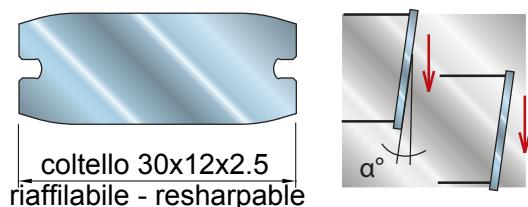

TFM 105 - Secure Block

- Due spine che tengono il coltello
- Two spines which hold the knife
- Angolo assiale di taglio (α°) favorisce lo scarico del truciolo
- Cutting axial angle favors the swarf.
- Maggior finitura sul legno
- Higher wood finishing
- Coltello riaffilabile da 30x12x2.5
- Reversible knife 30x12x2.5

Axial sharing profile Z2+2

- Profilo diviso in due parti per ottenere performance di taglio e grado di finitura migliori.
- Profile divided in 2 parts to have excellent shear and grade of finishing
- Facilitazione scarico del truciolo
- Swarf facilitation
- Performance Z2+2 equal as Z4 tool
- Z2+2 Perfomace equal to a Z4
- Utilizzato per ogni tipo di legno soprattutto per legni duri.
- Use for soft and hard woods

Determinazione della velocità di avanzamento

How to determinate the feeding speed (U)

VELOCITA' DI AVANZAMENTO PER FRESE E TESTE

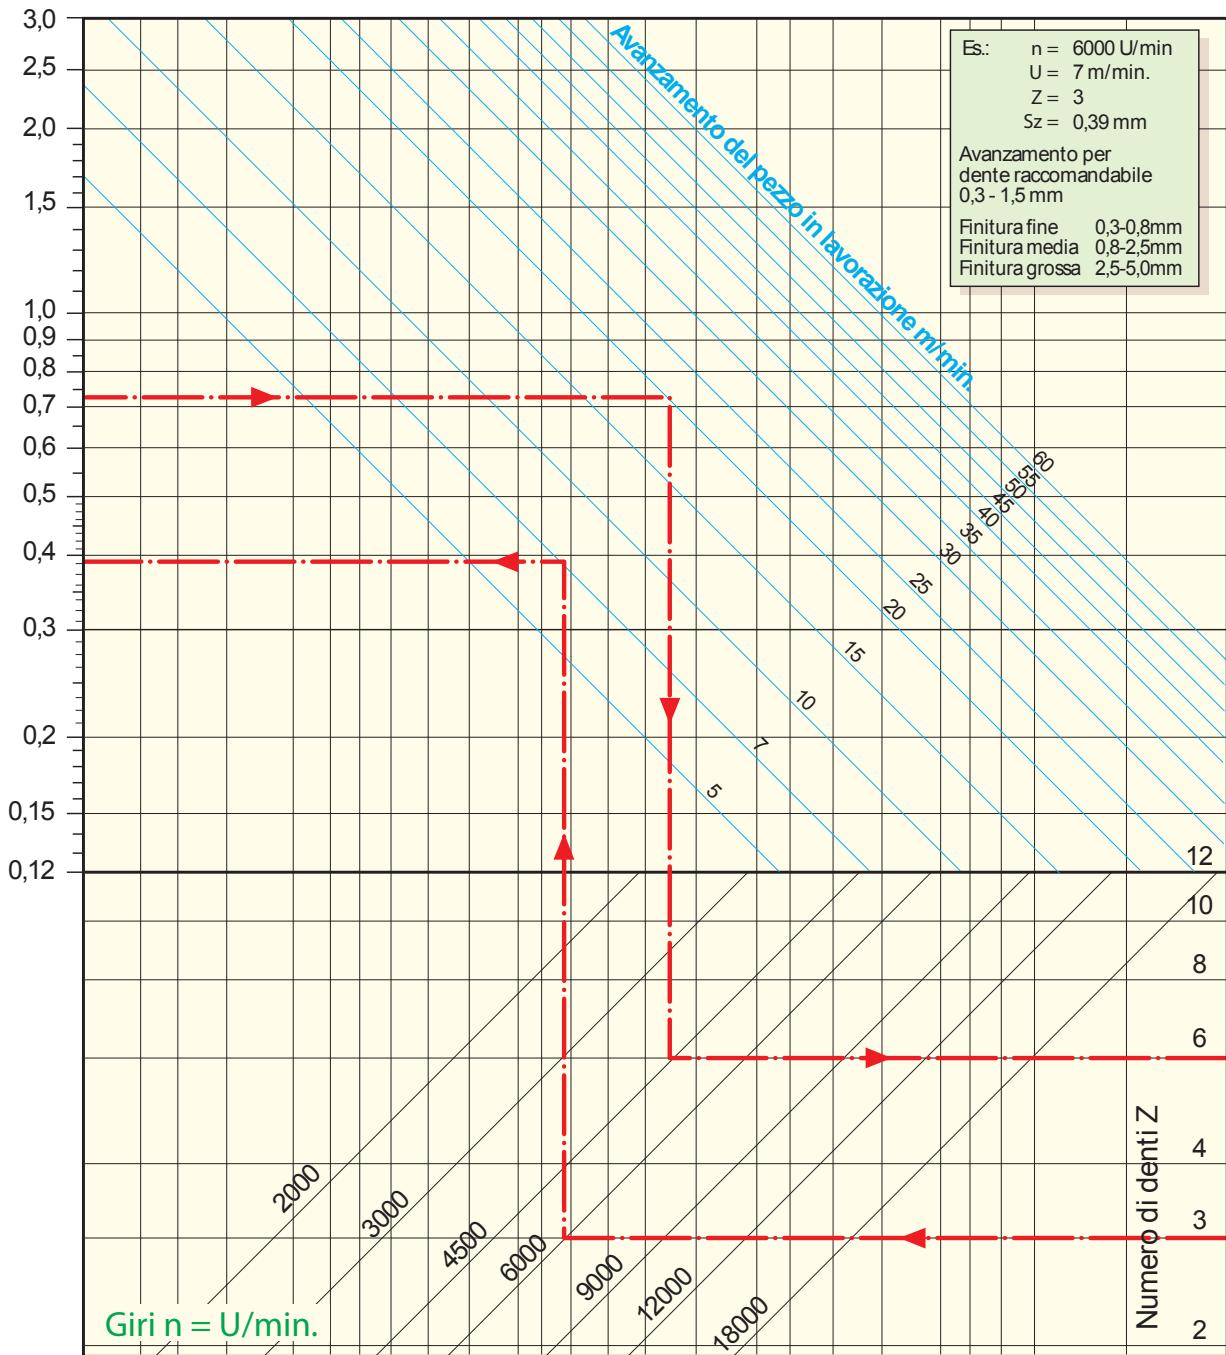

- U = Velocità di avanzamento m/min.
- Sz = Avanzamento unitario per dente mm
- Z = Numero dei taglienti
- n = Numero giri al minuto

$$U = Sz * Z * n / 1000$$

FEEDING SPEED FOR CUTTER AND CUTTERHEADS

- U = Feeding speed m/min.
- Sz = Unitary feed for tooth mm
- Z = Number of teeth
- n = Number of revolution for min.

$$Sz = U * 1000 / Z * n$$

Determinazione della velocità periferica

How to determinate the peripheal cutting speed (V)

VELOCITA' DI TAGLIO

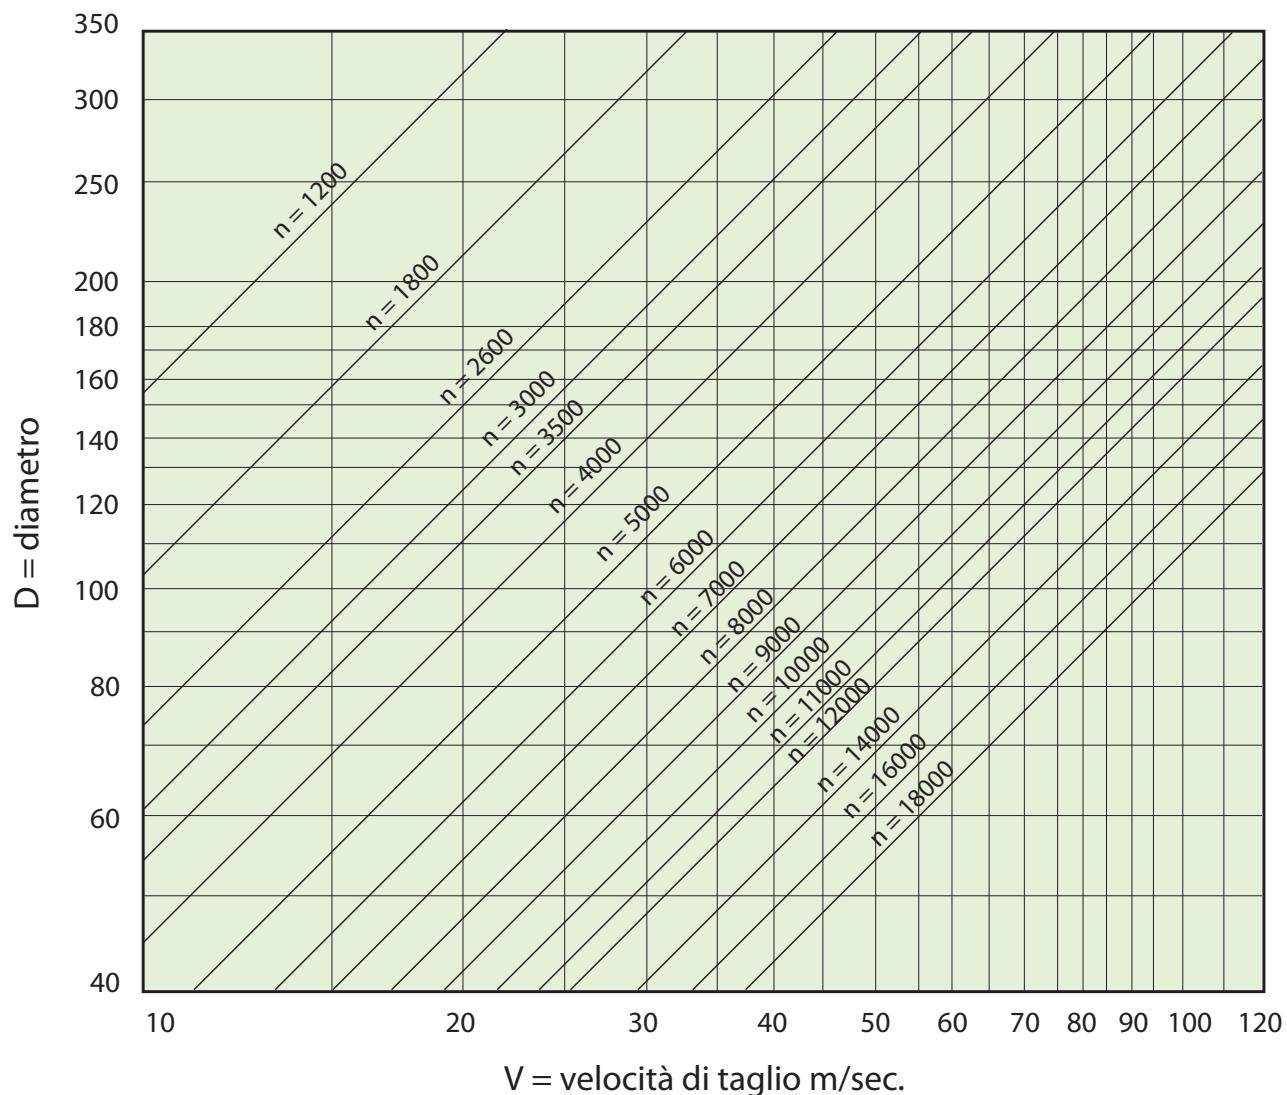

La velocità di taglio degli utensile dipende dal materiale da tagliare ed è dato dal numero dei giri della macchina al minuto e al diametro dell'utensile.

La velocità di taglio viene calcolata in base alla seguente formula

CUTTING SPEED

The cutting speed of the tools dependes on the materials to be cut and by the number of r.p.m. and the diameter of the tool. The cutting speed is calculated on the basis of the following formula

$$V = d * \pi * n / 1000 * 60$$

Asportazione del truciolo

Removal of shaving

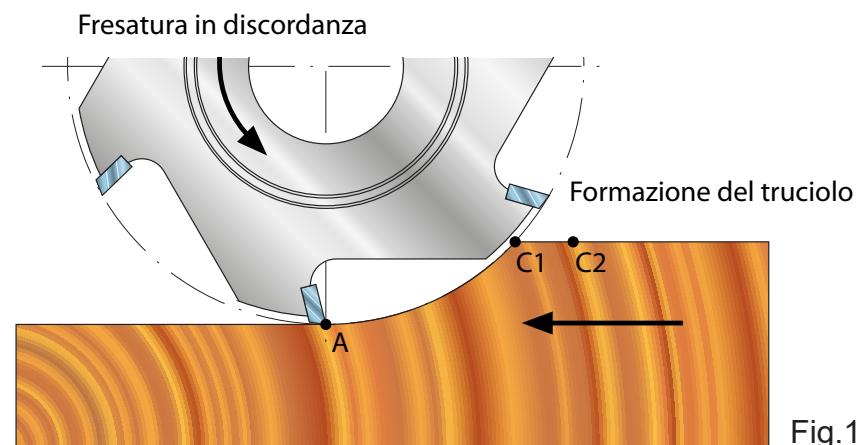

Fig.1

1. FRESATURA IN DISCORDANZA – Fig. 1

Per l'avanzamento manuale è ammessa soltanto la fresatura in discordanza. Il movimento di taglio dell'utensile e l'avanzamento del materiale da lavorare sono opposti. Si inizi con spessore del truciolo uguale a 0 (A). Il tagliente tocca prima il legno poi il truciolo diventa più stabile e più spesso (C1 - C2). La formazione del truciolo avviene con un procedimento di rottura e scheggiatura del legno, il cosiddetto preclivaggio.

Vantaggi

Con il preclivaggio si riduce la forza di taglio e la potenza, ottenendo una maggior durata. È necessario avere un minor assorbimento di potenza.

Svantaggi

Se la vena ed il senso della scheggiatura sono irregolari, si può avere una superficie ruvida e una rottura delle fibre. Soprattutto nella lavorazione in centri a controllo CNC dove la direzione di avanzamento e quella delle fibre cambia continuamente, sono necessarie fresature speciali, per evitare angoli di taglio sconvenienti. Rompendo il truciolo davanti al tagliente si riduce il preclivaggio.

1. ROTATION AGAINST FEED DIRECTION – Fig.1

For manual feed, only rotation contrary to the workpiece is allowed. The tool cutting direction and the feed of the material being machined are contrary to each other. Start with a zero shaving thickness at point (A). The tool first touches the wood, then the shavings become more stable and thicker (C1 - C2). Shavings are formed by the wood breaking down and chipping, otherwise known as pre-cleavage.

Advantages

With pre-cleavage the cutting force and power are reduced to obtain longer duration. A lower level of power absorption is necessary.

Disadvantages

If the grain and the direction of chipping are irregular, a rough surface and fibre breakdown can occur. Especially in the case of CNC work centres where the feed direction and fibre are constantly changing, special cuts are necessary in order to avoid awkward cutting angles. Breaking down the shavings in front of the tool reduces pre-cleavage.

Asportazione del truciolo

Removal of shaving

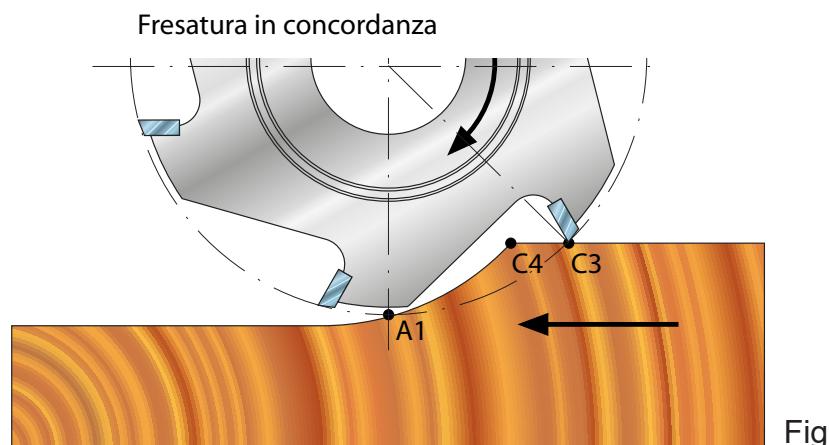

Fig.2

2. FRESATURA IN CONCORDANZA – Fig. 2

Solo per avanzamento meccanico, il movimento di taglio dell'utensile ed il senso di avanzamento del materiale da lavorare hanno la stessa direzione. Il tagliente crea nella sua curva un truciolo spesso (C3 - C4) che a fine curva si assottiglia fino a 0 (A1).

Il tagliente avanzando nel legno, crea un truciolo sempre più sottile e morbido, il pericolo di preclivaggio si riduce.

Vantaggi

Anche con venature irregolari si ottengono superfici di qualità

Svantaggi

A causa di un preclivaggio ridotto, il tagliente si consuma di più ed in fretta. In questi casi sono necessarie fresature speciali, rompendo il truciolo davanti al tagliente si reduce il preclivaggio.

2. ROTATION WITH THE FEED DIRECTION – Fig. 2

Only for mechanical feeds, the tool cutting direction and the feed of the material being machined are the same. The cutter creates a thick shaving along its curve (C3 - C4) which at the end of the curve thins out to zero point (A1).

The cutter creates an increasingly thinner and softer shaving as it runs through the wood, the danger of pre-cleavage is lessened.

Advantages

Quality surfaces are obtained even with irregular grains.

Disadvantages

Because of less pre-cleavage, the cutter wears more and more quickly. In these cases special cuts are needed, to breakdown the shavings in front of the cutter to reduce pre-cleavage.

Direzione di taglio nella lavorazione del legno

Cutting direction in the woodworking process

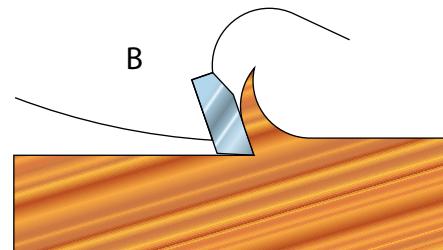

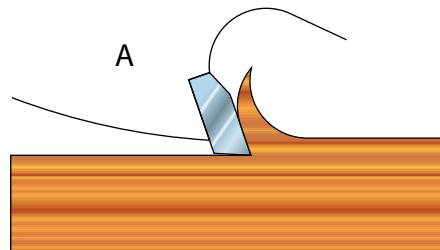

Fig.3

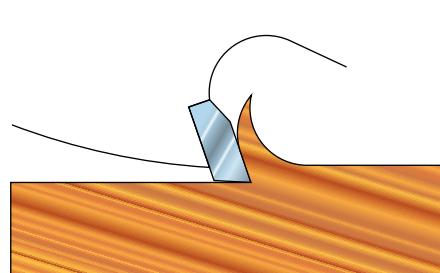

Fig.4

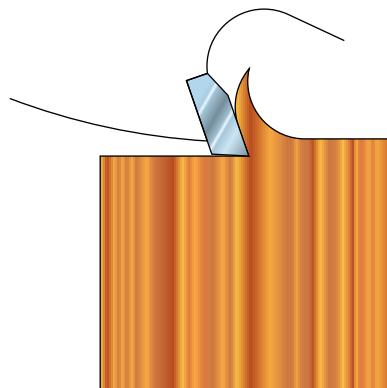

Fig.5

Fig.3 - Taglio lungo vena

- A. A favore della venatura : lavorazione facile, con buona qualità della superficie lavorata. Possibile un avanzamento veloce.
- B. Contro la venatura : lavorazione difficoltosa a causa di scheggiature. Questo tipo di lavorazione andrebbe evitata modificando, ad esempio, il senso di rotazione dell'utensile.

Fig.3 - Cutting with the grain

- A. *With the grain: easy conditions, with good quality of already machined surface. Fast feed is possible.*
- B. *Against the grain : hard conditions due to chipped surface. This type of machining should be avoided, in the most extreme cases by inverting the direction of tool rotation.*

Fig.4 - Taglio attraverso vena

Lavorazione facile e leggera possibile un avanzamento veloce con qualità della superficie lavorata leggermente ruvida.

Fig.4 - Cutting across the grain

Under easy and light conditions a fast feed rate is possible with a slightly rough quality of already machined surface.

Fig.5 - Taglio di testa

Lavorazione difficile che richiede una elevata forza di taglio e di conseguenza un avanzamento lento, con qualità della superficie lavorata leggermente ruvida a causa della rottura delle fibre.

Fig.5 - Cutting across the head

Difficult conditions which require considerable cutting force and consequently a slow feed, with a slightly rough already machined surface due to fibre

Sicurezza

Safety

Gli utensili per la lavorazione del legno, se utilizzati in modo inopportuno, sono un rischio per l'incolumità dell'operatore, tanto più se si pensa all'elevato numero di giri di esercizio e alla presenza di parti molto taglienti.

La CENTERINOX è molto attenta a queste problematiche ed è per questo che mette l'alta tecnologia della quale dispone al servizio della sicurezza, utilizzando materiali qualificati e progettando i propri utensili sempre in conformità alle norme antinfortunistiche europee (EN847-1), contrassegnando gli utensili che produce con il proprio logo e la massima rotazione al minuto ammessa (rpm), la quale non deve essere mai superata, inoltre ne identificata l'appartenenza alle seguenti categorie :

- utensili per lavorazione con avanzamento manuale MAN (Fig. 6).
- utensili per la lavorazione con avanzamento meccanico MEC (Fig. 7)

Woodworking tools, if used improperly, can constitute a danger and risks to the operator, even more so because of the high number of revolutions and given the presence of many sharp parts.

CENTERINOX is very aware of such problems and for this reason puts its high technology to the service of safety, using suitable materials and constantly striving for the best, always designing its tools to conform to European safety norms (EN847-1).

Mark all tools in an indeleble way whit the company logo type and the maximum tool's rotation speed per minute (rpm), allowed that should never be exceded. Which identifies to which category each tool belongs :

- tools to be used with manual feed system MAN (Fig. 6).
- tools to be used with mechanical feed system MEC (Fig. 7)

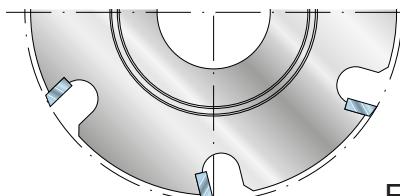

Fig.6

- spessore truciolo limitato al massimo a 1,1mm
- possibilmente forma circolare
- apertura per truciolo limitata

- limited chips thickness to a maximum of 1,1mm
- if possible it has a circular shape
- limited cutter projection

- indica che l'utensile può essere utilizzato solo per lavorazioni con avanzamenti meccanici

- that means the tool can be used exclusively on mechanical feed operation

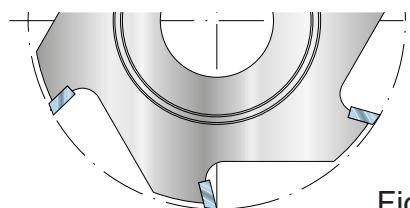

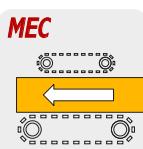

Fig.7

Manutenzione degli utensili e Raccomandazioni

Tool Maintenance and Advice

- I taglienti sono soggetti al deposito di resine, colle, polvere che ne alterano durata e qualità. Per questo motivo devono essere mantenuti sempre puliti.
 - E' necessario mantenere pulito anche il corpo fresa per dare libero sfogo al truciolo utilizzando solventi adeguati al tipo di materiale di cui è costituito.
 - Assicurarsi che gli assi e i piani di attacco della macchina siano in tolleranza.
 - Verificare sempre che il senso di rotazione macchina-utensile sia corretto.
 - Non superare mai i limiti del numero di giri indicati sull'utensile.
 - Verificare il bloccaggio di tutte le eventuali parti mobili dell'utensile.
 - Utilizzare solo ricambi originali Centerinox.
 - Non manomettere gli utensili per impieghi
-
- *Teeth are subject to deposits of resin, glue and dust which affect their wear and quality. They must therefore be kept clean at all times.*
 - *The body of the cutter must also be kept clean to allow shavings to detach properly, have to be used the correct cleaners.*
 - *Make sure that the machine tables and axes are gauged correctly.*
 - *Always make sure the machine-tool rotational direction is correct.*
 - *Never exceed the rpm limit stamped on the tool.*
 - *Make sure any moving parts of the tool are locked.*
 - *Only use original Centerinox spare parts.*
 - *Never tamper with the tools for personal use, or with blunt instruments.*

Soluzioni Individuali

per il Tuo Serramento

Individual Solutions

for Your Window

L'infisso è il componente più importante della struttura abitativa e importante quindi avere una finestra ad alte prestazioni con un basso valore di trasmittanza termica (Uw), al fine di minimizzare perdite di energia.

Nel caso di interventi di riqualificazione energetica, per ottenere i risultati desiderati, non è sufficiente acquistare le finestre con un rendimento elevato ma occorre la collaborazione di un'azienda specializzata nel proporre il design e i materiali del serramento in base alla zona climatica d'appartenenza.

Le caratteristiche che dovrebbe avere un infisso per garantire il comfort interno ottimale sono :

- buon controllo della luce naturale (vetro)
- resistenza agli agenti atmosferici
- buon isolamento termico (basso valore Uw)
- buon isolamento acustico
- durata nel tempo

Le prestazioni di una finestra non dipendono soltanto dal materiale utilizzato per la sua costruzione (legno, alluminio, PVC) ma anche dalla scelta del vetro da montare. Investire in nuove finestre con doppi vetri è una scelta che verrà ripagata con una sensibile riduzione dei consumi energetici.

E' inoltre importante affidarsi ad aziende specializzate in installazione di serramenti, per non compromettere l'obiettivo finale che si voleva ottenere in termini di isolamento termico e acustico.

L'infisso

Window concept

Windows are the most crucial component of the building envelope, because they are usually responsible of the heat losses.

It is important to have high performance window with a low thermal transmittance value of Uw, in order to minimize heat losses.

In the case of redevelopment energy, to achieve the desired results, however, is not enough buy windows with an high performance, but it also calls for proper installation, which must be done by specialized company, able to guide you in choosing the right windows and doors themselves.

An incorrect installation can compromise the ultimate goal in terms of thermal / acoustic insulation that you wanted to get.

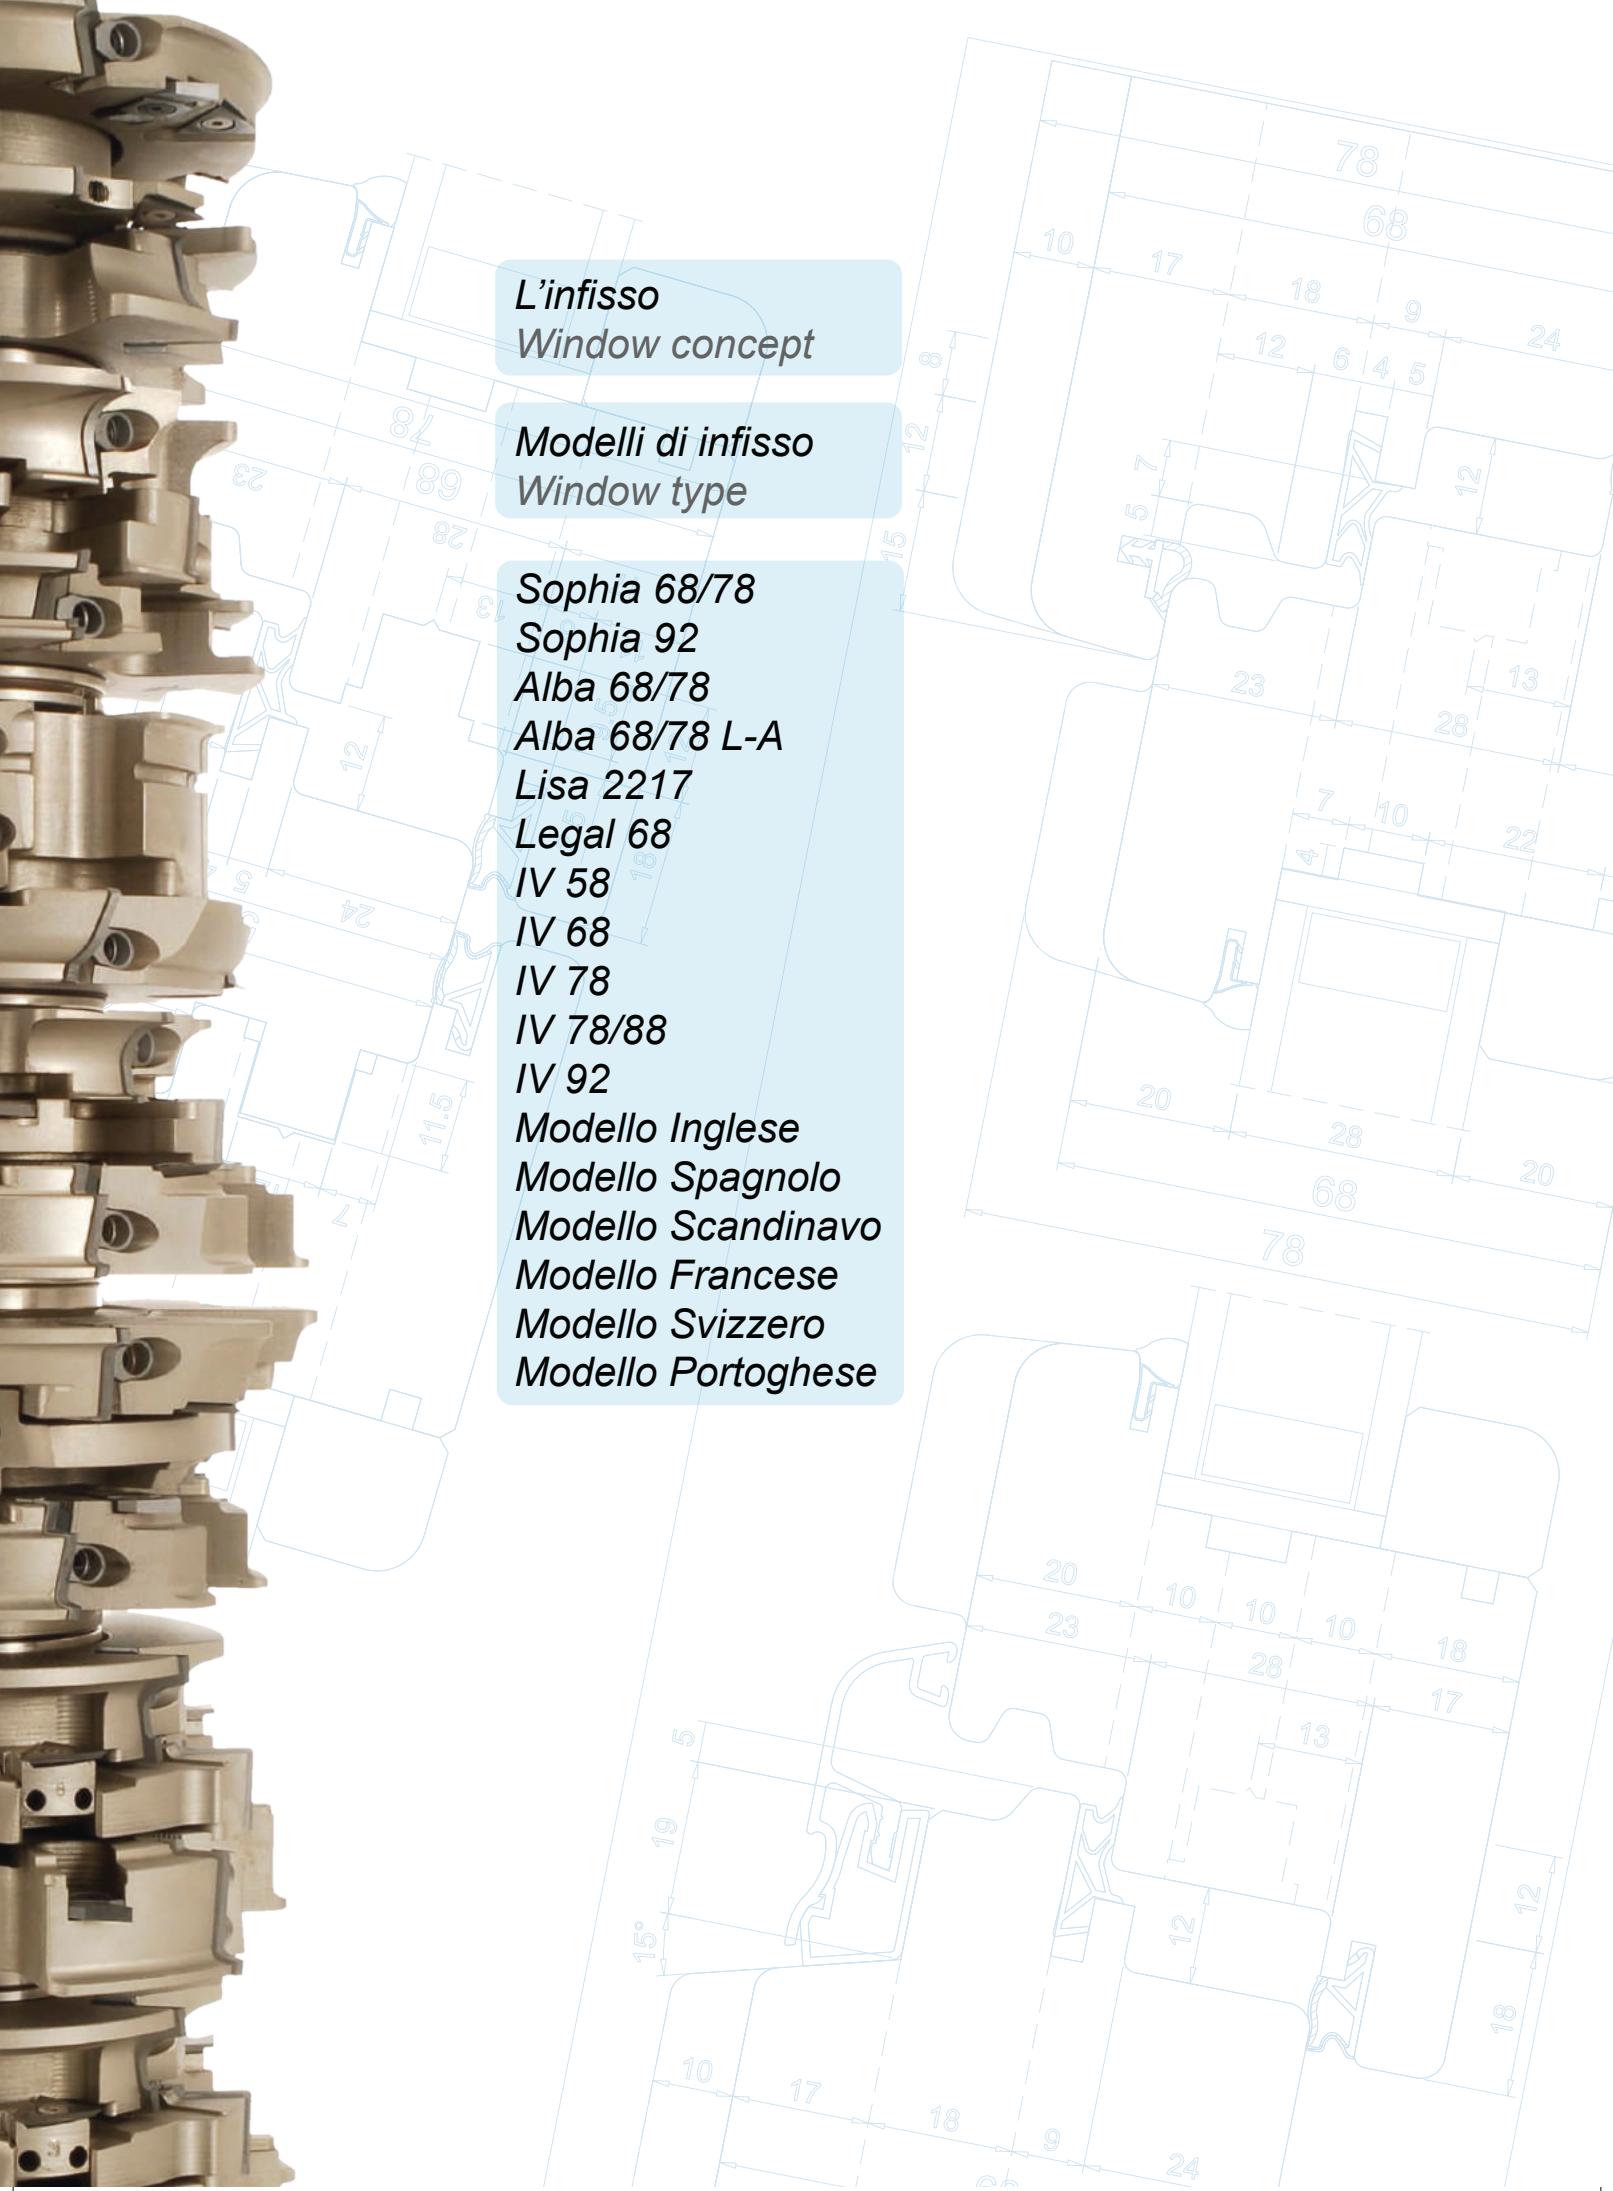

With specialized company who guide you to choice the right way to design window and material for build, it you can reach not only a good thermal insulation but also for the acoustic .

The features that should have the doors and windows to ensure optimum indoor comfort are:

- good control of natural light
- Resistance to atmospheric agents
- good thermal insulation (low Uw-value)
- good sound insulation
- Long life

The performance of a window, does not only depend on the material used for its construction (wood, aluminum, PVC) but also by the type of glass inserted.

Investing in new windows and double glazing is a choice that is repaid by the reduction of energy consumption .

Hydro clamping tools'holders HSK-63F

CODE	h mm	d mm	D mm
MPP070.001	50	20	42
MPP070.002	52	25	50

Agendo sulla vite si manda in pressione il liquido presente nella camera riducendo così il diametro del foro del mandrino. Questo provoca un serraggio uniforme dell'utensile.

Working on the screw we add pressure to the liquid part into the toolholder that clamp uniformly the tool's shank.

MPP080.004	55	25	35	37

Offriamo servizio di apertura e serraggio del mandrino per affilatura o sostituzione dell'utensile.

Our company offers toolholder's opening and closing service to substitute or resharpen the tool.

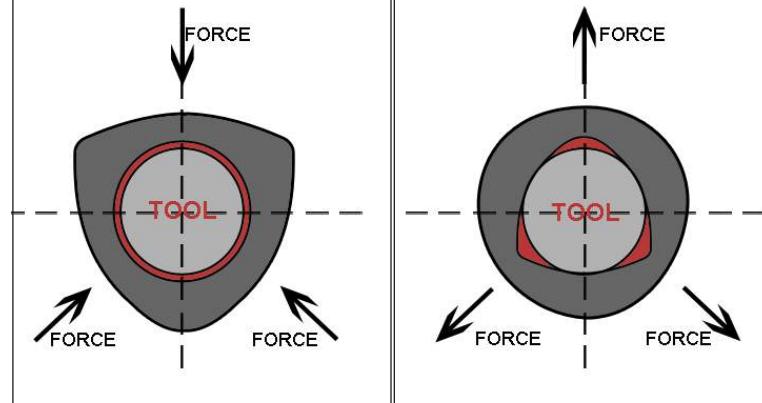

Sotto pressione, la sede poligonale diviene tonda, permettendo l'inserimento o l'estrazione dell'utensile.

Under pressure the polygonal part became rounded in the order to insert or take out tool.

Tolta la pressione, la sede ritorna poligonale, bloccando l'utensile in tre punti.

Without pressure the inside part return polygonal in the order to stop the tool on 3 point.

Lavatrice ad ultrasuoni

Ultrasonic cleaning

CODE	INT. VASCA LxPxH (mm)	CAPACITA' litri	EST. VASCA LxPxH(mm)	ALIMENTAZIONE	SCARICO
LVT010.001	330x330x180	19	380x560x330	230V	3/8"
LVT010.002	400x400x250	40	600x630x480	230V	1/2"

Tutti gli utensili per la lavorazione del legno massello e/o pannelli richiedono spesso, oltre che una manutenzione periodica di affilatura, una pulizia accurata. Dopo un utilizzo prolungato sui taglienti delle lame e delle fresa, si creano depositi di materiale che riducono drasticamente l'efficienza dell'utensile.

Le LAVATRICI AD ULTRASUONI della Centerinox, con i suoi detergenti specifici, consentono di eseguire una perfetta micropulizia di tutti gli utensili; è possibile pulire in tempi ristretti, punte, coltelli, lame, e fresa togliendo dalla superficie ogni tipo di residuo.

All wood working tools for solid wood and panels often require, as well a periodic maintenance of sharpening and careful cleaning. After a prolonged use on the cutting edges of the blades and cutters, creating deposits of material which drastically reduce the efficiency of the tool.

The ULTRASONIC CLEANING of Centerinox, with its special cleaning products, allow you to perform a perfect micro-purity of all tools, you can clean in a short time, tips, knife, blades and cutters from the surface by removing all types of residue.

Grease high pressure pump

PRESTAZIONI / performance		CARATTERISTICHE / features	
CONTROPRESSIONE back pressure	PORTATA output	lunghezza pompa / lenght	500 mm
100 bar	1,0 / 1,5 cc	diametro pompa / diameter	60 mm
200 bar	1,0 / 1,5 cc	peso / weight	2 kg
300 bar	1,0 cc	funzionamento / working	manuale/manual
400 bar	0,5 cc	pressione di esercizio / pressure	400 bar
		pressione massima/maximum pressure	700 bar
		erogazione / supply	1,5cc ogni colpo
		capacità / capacity	600 gr.
		confezione singola / single package	sacchetto/plastic bag
		confezione multipla / multiple package	cartone/carton box
		portata a 100 bar/ output at 100 bar	300-450 ml/min
		portata a 200 bar / output at 200 bar	200 ml/min
		n° pompare a 100 bar/n° of strokes at 100 bar	30 per min

Pompa manuale per grasso adatta per ogni tipo di grasso non corrosivo in cartuccia.

L'ingassatore a pompa ad alta pressione è di alta qualità professionale. Il prodotto arriva a vincere una pressione nominale di 700 bar = 10000 psi in fase di test. Durante l'utilizzo supera la pressione di 400 bar = 6000 psi senza subire danni o deformazioni, a differenza dei compressori di importazione standard.

POMPA : caricamento del grasso a cartuccia

CARTUCCIA: 600 gr., ø 56mm

Suitable to every type of non-corrosive grease in cartridge. Grease high pressure pump a professional top quality item. This gun gets to win a nominal pressure of 700 bar = 10000 psi during quality tests. In operating conditions it can overcome the pressure of 400 bar = 6000 psi without damage or deformation, unlike standard grease guns.

PUMP : manual filling with cartridge

CARTRIDGE: 600 gr., ø 56mm

ISTRUZIONI PER L'INSERIMENTO DELLA CARTUCCIA

- 1- Tirare l'asta spingigrasso del pistone
- 2- Svitare la testa dal cilindro
- 3- Prendere la cartuccia con il tappo, togliere il tappo in plastica e tagliare l'altra estremità lungo il bordo rientrante; inserire la cartuccia nel cilindro
- 4- Riavvitare la testata
- 5-Far rientrare l'asta spingigrasso premendo la levetta di arresto
- 6- Fare fuoriuscire (spurgare) l'eventuale presenza di bolle d'aria nella testata svitando il tappo di spurgo

CARTUCCIA

INSTRUCTIONS FOR USE WITH CARTRIDGE

- 1- Pull the pump shaft
- 2- Screw off the head of the hand lever pump
- 3- Remove the plug of the cartridge and cut the other end along the re-entering edge; put the cartridge in the hand lever pump
- 4- Screw again the head
- 5- Press the trigger to re-enter the pump shaft
- 6- Purge the pump screwing off the vent plug and operate the lever.

VRT010

Vortice - Convogliatore a ghiera
Per pinze ER25, ER32, ER40

Vortex - Conveyor clamping nut
For ER25, ER 32, ER40 spring collets

- VORTICE convogliatore di polvere e truciolo.
- Evita depositi di polvere e trucioli dal piano di lavoro fino al 90%.
- Rende l' ambiente di lavoro sicuro e praticamente privo di polveri dannose per l'operatore.
- Di facile utilizzo ed assemblaggio, non necessita di particolari utensili di montaggio / smontaggio.
- Range di lavoro molto ampio, da un minimo di 3mm ad un massimo di 25mm dal piano di lavoro.
- Utilizzabile con diversi tipi di frese, dalle elicoidali alle sagomate.
- Disponibile per mandrini Hidro System, ghiere ER25, ER32 ed ER40.
- Costruito in lega di Alluminio 7075 (Ergal), materiale leggero e resistente, perfetto per questo tipo di applicazioni.
- Trattamento superficiale contro la corrosione.
- Oltre che al nesting, può essere utilizzato in lavorazioni differenti, dalla contornatura alla profilatura.

- Conveyor of dust and swarf VORTEX.
- Prevent dust and swarf from the work plane up 90%.
- It makes the working environment safe and practically free of dust harmful to the user.
- Easy to use and assembly, no need for special tools for assembly / disassembly.
- Very broad work range, from a minimum of 3mm and a maximum of 25mm from the work plane.
- Used for different types of milling cutters, from the helical to the profiled ones.
- Available for Hydro System spindles, ring-nuts ER25, ER32 and ER40.
- Made in aluminum alloy 7075 (ERGAL), lightweight material and durable perfect for this kind of applications.
- Surface treatment against corrosion.
- In addition to the nesting, it can be used in different processes, from the contouring to the profiling.
